Description

Wire Boiler Thermometer – Temperature Monitoring for Kitchen and Food Processing

The wire boiler thermometer enables reliable temperature monitoring in pots, boilers and similar containers in food processing and professional kitchen environments. The housing is made of stainless steel, making it suitable for use under hygienic requirements. The thermometer is supplied as an individual unit.

Product Features

- Suitable for temperature monitoring in boilers, pots and comparable containers
- Stainless steel housing for robust and hygiene-compliant use
- Wire design allows flexible positioning within the container
- Suitable for use in kitchen, counter and food production environments

Technical Data / Specifications

- Housing material: stainless steel
- Packaging unit: piece
- Weight: 62 g
