Description

Detectable Scraper – safe working tool for hygiene-critical production areas

The detectable scraper is a hand tool for use in food processing as well as in kitchen and counter environments. Its detectability allows reliable identification in metal and X-ray detection systems – an essential feature for HACCP-compliant production processes. The tool supports compliance with hygiene standards and minimises the risk of foreign body contamination in food.

Product features

- Detectable – suitable for use in metal and X-ray detection systems for foreign body control
- Supports HACCP-compliant work processes in food processing
- Suitable for use in production, kitchen and counter environments
- Robust handling when scraping, portioning and cleaning work surfaces
- Hygienic design for food processing operations
